NEW CHALLENGES IN OUR BATTLE AGAINST COVID -19 PANDEMIC

As we go to press, Kerala prepares to open the portals of schools and colleges as well as the Tourism and hospitality sectors. With the vaccination drive progressing well, the society braces to meet the challenges this decision will bring in its wake.

Y. ABDULLA KUNHI
CHANCELLOR,
YENEPOYA
(DEEMED TO BE
UNIVERSITY)

The mettle of the physician is tested in war-like situations brought on by the second wave of this pandemic. Working long hours in PPE suits and visits to ICU followed by the trauma of counseling the family members of the patients. These conditions can break the psyche of the best of the best. Very often they are isolated from their own families too.

At Yenepoya, we took up this challenge head on by developing an innovative system backed by Tele-counseling and Tele-conferencing. The integration of both these brought good results, much to the relief of all affected. Like I have often expounded, nothing works like team work.

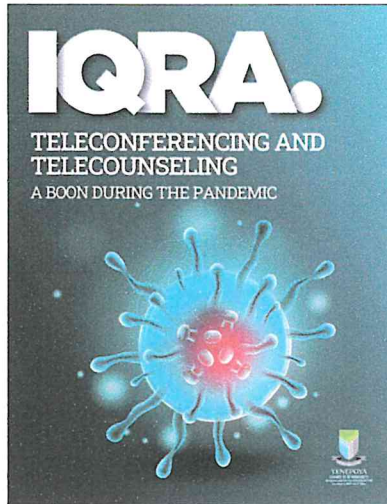

We cannot keep the population locked down, away from their means of livelihood forever. But by continuing the vaccination program and extending it to the younger population, we can keep the enemy at bay.

India has been a model to the advanced nations as far as the vaccination drive was concerned. But as schools and colleges reopen, we have to keep a strict vigil through our teachers to see that protocols are followed strictly during school hours. We hope to come out successful in this final test of our times.

WELCOME NOTE

The vaccination drive towards total immunity

DR M VIJAYAKUMAR
VICE CHANCELLOR

India has done well in handling the first wave of the pandemic, with a low death rate and minimal positive cases. The second wave struck with a greater impact, forcing us to take the vaccination route. India started vaccination with Covishield and indigenous Covaxin on January 15 for a target group of frontline healthcare workers and other identified groups. From February 1, vaccination was opened for the 60+ population, and from March 1 for the 45+ population. As demand from the younger generation mounted, vaccination was opened for the 18+ from May 1. The government is putting in its best effort to secure imported vaccine supply, but most international players have already reserved the stocks for Western countries. To achieve herd immunity, 60-70 per cent of the population needs to be vaccinated with two doses, thus, there is a strong need to quickly vaccinate 42-50 crore more people.

By doing this, a possible third wave can be averted or handled with minimal morbidity and mortality. Of course, this is on the assumption that the virus will not mutate further, and the vaccine will be able to protect against the variants effectively.

Vaccine hesitancy is present in all countries. Doctors play a major role in helping to overcome this hesitancy. By giving proper counselling doctors can dispel all kinds of doubts from the mind of the general public.

IQRA's buzz about the latest from our campus

This issue of IQRA brings you the insights of Yenepoya emerging as an active service provider during the Covid-19 pandemic through tele-conferencing and tele-counselling services not only in Karnataka but also in far off districts of Kerala. YMC had also launched a covid care initiative along with the Sailors Society, Southampton, UK for the healthcare needs of the seafarers and their families in the coastal region of Karnataka.

A very interesting article by Dr. Ajay Bhat on 'Immunity Through Ayurveda' covers in detail every aspect to enhance immunity to fight the pandemic. The Department of Community Medicine needs a special mention for their continuous involvement at various stages within and outside the campus since the outbreak of the pandemic in 2020 and of course facing the challenges until date. We have University news and also features on achievements and awards of the faculties and students of Yenepoya.

Happy reading !!

Immunity Through Ayurveda

Dr Ajay Bhat U, M.D (Ayu) *Associate Professor & Consultant, Department of Kayachikitsa, Yenepoya Ayurveda Medical College Hospital, Yenepoya (Deemed to be Univesity). Mangaluru

Dr Ajay Bhat U, M.D

Ayurveda

The ancient science of life has its origins about 5000 years ago, dating back to the Vedic period. This divine Indic science envisioned the mechanics of life through a different prism. It observed the symphony between macrocosm (Bramhanda) and microcosm (Pindanada). The 5 primordial elements (Panchamahabhutas) forms the focal point of basic principles of Ayurveda through its Three Humor Theory (TridoshaSiddhanta). These three humors/bio-energies govern the human body just like Wind, Sun and Moon regulate our planet. These principles have withstood several tests of time and are unshakable even today. As we enter the second decade of 21st Century, Covid 19 has challenged our scientific advancements across various spheres, questioning the very existence

of human race. As I pen down this paper, 4 million people have lost their life due to this pandemic across our planet since 2019. Today, the world is looking desperately at traditional medicines for solutions to contain Covid 19. There is an unprecedented interest to know what Ayurveda offers especially in preventive aspects particularly to enhance immunity.

Ayurvedic treatises have explained immunity under the concept of Bala (Inbuilt Strength). Acharya Charaka says "Bala mhyalamdosaharamNigrahayadosanam" (Ch. Chi.3/16),i.e Bala as the factor, that destroys the Doshas or disease causing factors. Acharya Chakrapani has described Vyadhikshamatva (Immunity) as Vyadhibala Virodhitwa i.e., antagonistic to the strength and virulence of the disease and VyadhyutpadaPratibandhakatwa i.e., the capacity to inhibit and bind the causes and factors of the disease. Bala has been used synonymous to Prana (Vital Energy) and Ojus which is the essence of the seven body tissues or Saptadhatu. Chakrapanidatta observes that Ojus which is the Sara of all the Dhatus in virtually not different than them, comparable to Ghee of the milk, honey of flowers and fruits, being located in Hridaya, mixes with Rasa dhatu and circulates through the blood

ATTESTED

vessels and capillaries (Dhamanis and Siras) by providing nourishment (Tarpana) of the entire body. It represents the strength of all the tissues and is present in the organism from time of fertilization (Shukra-ShonitaSamyoga) of the sperm and ova, due to its natural power (Chakrapani on Su. Su. 15/99).

The Ojus prevents, resists and overcomes such factors which are produced in the course of the vital activities of body and may lead to degeneration and decay of tissues. A few examples to quote are, Diabetes Mellitus (Madhumeha/Prameha), Pulmonary Tuberculosis (Rajayakshma), Tumors and malignancies (Arbuda), Premature ageing (AkalajaJara) where derangement of Ojus is observed. There are 3 clinical manifestations viz., Ojo- Visramsa, Ojo -Vyapat and Ojo-Kshaya which are seen due to mild, moderate and severe impairment in the availability Ojus to the dhatus. These conditions arise due to injury or diseases of the channels of distribution (Srotus) of Dhatus, altered quality and quantity of Ojus. The aetiological factors which bring about these conditions or the causes for reduced immune capability, according to Ayurveda, range from trauma (both physical and microbial), severe degenerative and wasting diseases, malnutrition, starvation to psychological stresses – anger, anxiety and grief etc. These factors depending upon their extent, degree and intensity of operation may result in the production of one of the above mentioned conditions (Su.Su. 15/23).

Mild, Moderate and Severe varieties of Covid 19 may be understood keeping in mind derangement of Ojus as described above. It may be noted that, role of emotional and psychological factors over proper functioning of immune system has been very clearly appreciated and described in Ayurveda.

Immunity (Vyadhi-Kshamatva) varies with the individuals. It also depends upon nutritional, environmental and individual factors.

Vyadhikshamatva or bala may be classified into 3 types viz,

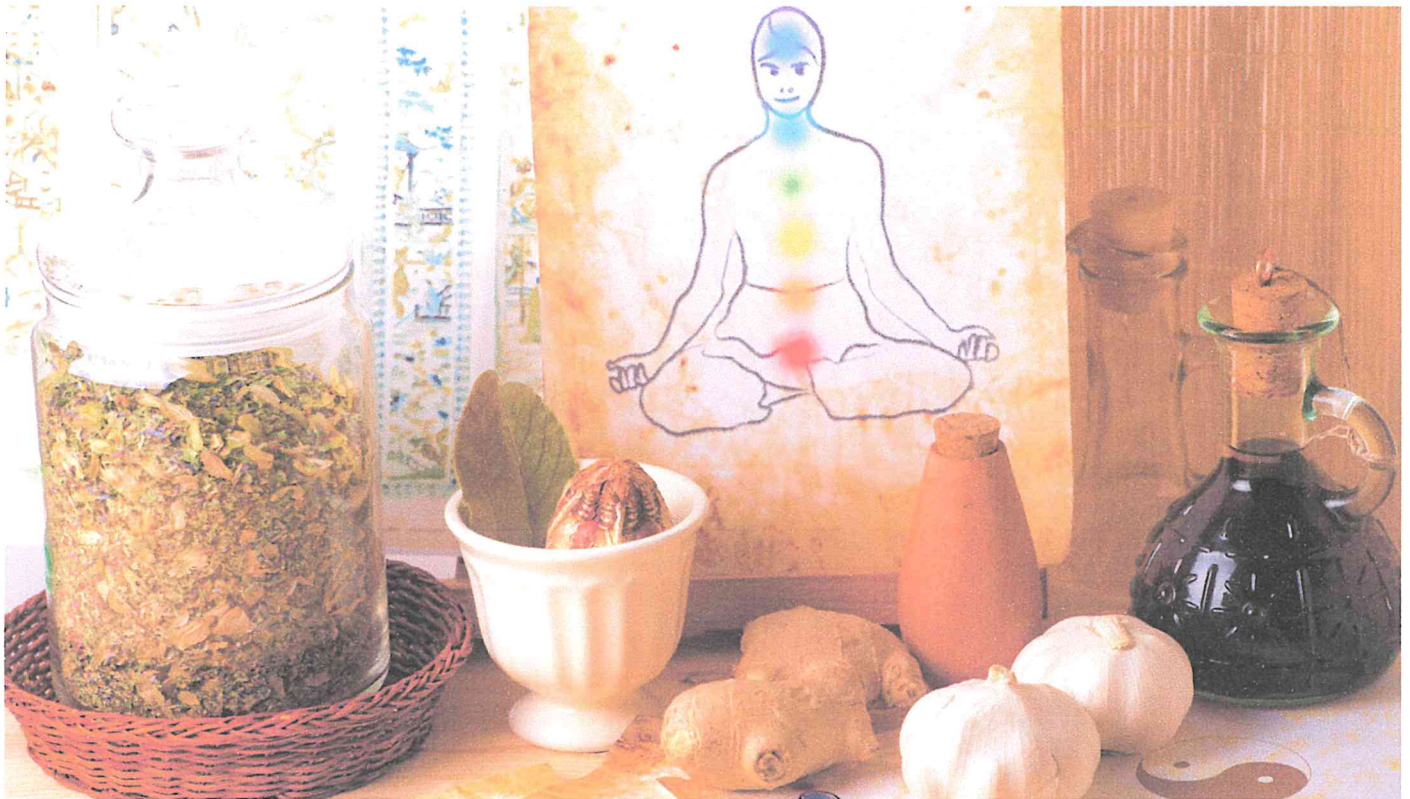

1. SahajaBala
2. KalajaBala
3. YuktikritaBala

SahajaBala: It is genetic and inborn resistance to disease, which exists since birth. It is said to increase with the growth of tissues and does not depend upon any other cause (ChakrapaniCa.Su. 11/36)

KalajaBala: This type of immunity is said to be influenced by seasonal traits and the age of the person.

YuktikritaBala: This type of immunity refers to modulation of body's resistance against diseases by resorting to appropriate OjovardhakaAhara as prescribed in Dinacharya and Ritucharya, performing Internal cleansing (Ritushodhana), intake of Rasayanadravyas/ yogas. An entire chapter is dedicated to making and usage of various Rasayanas in CharakaSamhita and SushrutaSamhita.

RasayanaTantra is one of the Eight limbs of Ayurveda (Ashtanga Ayurveda). It refers to nutrition, natural resistance and geriatrics. Apparently, Rasayana means an improved state of nourishment, which in turn upholds increased immunity and youthfulness. Rasayana can be a drug, diet or even a life style and conduct. AcharaRasayana described in CharakaSamhita shows way to enhance one's Bala (Inner strength) very similar to Yamas and Niyamas of Ashtanga Yoga. It is stated to contribute to the integrity of body tissues and thus increases longevity. The other benefits of this therapy are the promotion of memory and intelligence, the preservation of youth, lustre, complexion and voice. The various measures comprehended by this therapy are termed as Rasayana, because they conduce to the replenishment of Rasa and other body tissues. (Ca.Chi.1/1/12)

Rasayana therapy act by one of the following three ways, (M. Paul & Singh R.H., 1979)

1. At the level of Rasa dhatu: Thus directly improving the quality of nutrition at cellular level
2. Acting at the level of Agni: by improving digestion and metabolism of body
3. Acting at the level of Srotas: by improving the micro-circulation, it ensures proper perfusion and nourishment to tissues.

Ayurvedic texts have prescribed hundreds of mono-herbs in addition to compound drugs/formulations which are considered as Rasayanas, like

Guduchi (*Tinosporacordifolia*),
 Yashtimadhu (*Glycirriciaglabra*),
 Mandookaparni (*Centellaasiatica*),
 Shankapushpi (*Convolvulus pluricaulis*),
 Ashwagandha (*Withaniasomnifera*),
 Haridra (*Curcuma longa*),

Tulasi (*Ocinum sanctum*),
 Bala (*Sidacordifolia*),
 Amalaki (*Embilicaoffcinalis*) etc.

Several scientific studies have been conducted to evaluate immuno-modulatory response of above drugs and results obtained are very encouraging. In the context of Covid 19 too, many studies are currently underway to evaluate the immune-modulatory effects of above drugs. Government of India through the Ministry of AYUSH has come out with Guidelines for Ayurveda Practitioners in the prevention and management of Covid 19. (<https://www.ayush.gov.in/ayush-guidelines.html>). Some of the immunity boosting measures prescribed as per above guidelines are as follows,

Immunity Enhancers - Single Drugs:

Guduchi: Consuming 500 to 1000 mg of aqueous extract of Guduchi (*Tinosporacordifolia* (Thunb. Miers))

ATTESSED

Amalaki: Consumption of fresh Amla fruit (Indian gooseberry – *Emblicaefficialis* L/ *Phyllanthusemblica* L) or Amla candy is also advisable.

Haridra: Gargling with warm water added with turmeric powder (*Curcuma longa* L) and a pinch of salt or Turmeric (*Curcuma longa* L)

Tulasi: Frequent sipping of water processed with Tulasi (basil leaves – *Ocimumtenuiflorum* L Merr (synonym *Ocimum sanctum* L) is advised.

Ashwagandha root powder 3-5gm twice a day with warm milk or water/ ashwagandha extract 500mg twice a day with warm water,

Immunity Enhancers - Formulations:

Chyawanprashavaleha - 10 - 12 gm / 1 Spoon
Drakshavaleha - 10 - 12 gm / 1 Spoon
Indukantamgrutham - 10 - 12 gm twice daily before food, when hungry
Aravindasava - 15 - 20 ml with equal quantity of warm water after food
Balachaturbhadrachurna - 1 - 2 gm with honey
Haridrakhanda - 3 - 5 gm intermittently with honey/ warm water.

Lifestyle Tips (Dinacharya) For Boosting Immunity Early Morning Regime (4.30am to 8.30am) Wake up between 4:30 - 5:00 in the morning or 45 minutes before sunrise. Drink 1-3 glasses of warm water

Gandusha / Kavala (Oil Pulling) 1 tablespoon of sesame or coconut oil for Kavalafollowed by warm water rinse.

Gargle with warm water added with a pinch of turmeric and salt, Triphala, and Yashtimadhu. ShuddhaTanka (2% aqueous solution), Madhoodaka (5% aqueous solution) also can be used for Kavalagraha.

Nasal Health – PratimarshaNasya (2 drops of sesame / coconut oil each nostril).

Daily practice of Yogasana, Pranayama and meditation for at least 30 minutes as advised by Ministry of AYUSH, Warm water bath.

After Noon Regimen:

Don't sleep during the daytime Involve in Work from Home/Indoor recreational activities like Studies, Reading, Painting, Gardening, Playing-listening Music, Social Media etc.

Evening Regimen:

Meditation / Pranayama – 30 minutes Indoor Recreational Activities Dietetic Rules Eat only when hungry, in the appropriate amount according to the digestive power (Neither too less nor more). Always take a fresh & warm diet. Eat easily digestible foods. Eat a night meal 3 hours after sunset or till 8 pm. Sleep atleast 2-3 hours after dinner. Adequate sleep is very important for health.

Other General Measures:

Dhupana - (fumigation) of the house every evening with antimicrobials such as Neem leaf, Sarshapa (*Brassica campestris* L), Loban (gum bezamin/benzoin - *Styraxbezoin*Dry), Karpura (*Cinnamomumcamphora* (L) J.Presl.), Ghee etc. Also usage of AparajitaDhoomaChoorna (A.H. JwaraChikitsa) as per availability can be adopted.

Yenepoya Medical College Hospital launches COVID Care Initiative jointly with the Sailors Society, Southampton-UK

Background

YMC along with the Sailor's Society, Southampton, UK launched COVID care initiative project for the seafarers and families in the West Coast of India. Sailors' Society is an international, non-denominational Christian maritime charity, founded more than 200 years ago with the mission of helping destitute seafarers in London's docks. Even today, the Sailors' Society is still committed to transform the lives by caring for the world's 1.6 million seafarers and their families at home, in port and at sea through chaplaincy, education and the relief of poverty and distress. The charity works internationally to provide practical, emotional and spiritual welfare support to the world's seafarers, regardless of background or faith.

With their presence in more than 91 global parts and with projects and services in 21 countries, the Sailors' Society through its chaplains and volunteers help hundreds of thousands of seafarers each year. They extend

a hand of friendship, hospitality and pastoral care to everyone they meet, and offer practical help, like phone cards to connect with loved ones at home, the latest newsprint in many languages and access to Wi-Fi hotspots.

The Sailors' Society provides grants and support to families in need and run projects in seafaring communities around the world: from healthcare for retired seafarers in India to a primary school in Ghana. Its mission is to meet the practical, emotional and spiritual needs of seafarers and their families.

Association with Yenepoya Medical College Hospital

Two years ago, a representative of Kasargod Sailors' Society visited the department of MSW to explore the possibility of developing linkages for healthcare needs of the members of the Sailors' Society. As a first step to reaching out to the seafarers' families a medical camp was conducted with the initiative of Dr. Prabha Adhikari and her

ATTESTED

Geriatrics Department team. Department of MSW facilitated consultations with the Medical Superintendent and HOD Hospital Administration with the representatives of the Sailors' Society (Indian and Foreign) to further the partnership with the hospital for providing healthcare services for the families referred by the Society. Capt Manoj Joy, National representative of Sailors' Society based in Chennai, approached us with a proposal to be part of COVID Care Initiative funded by the Sailors' Society, Southampton. An online meeting was initiated with the representatives of Sailors' Society Southampton, Sara Baade, CEO and Gavin Lim, Regional Development Manager, Asia, to discuss the nature and process of the interventions required to help the seafarers during the COVID pandemic. Further to the meeting, Yenepoya Medical College Hospital under the aegis of Yenepoya (Deemed to be University) decided to launch the project 'COVID Care Initiative for the Sailors' families' with financial aid from the Sailors' Society Southampton, England.

In the initial phase of the project it is envisaged to cover 2450 sailors' families out of the 5000 scattered in Mangalore, Kasargod, Goa and Ratnagiri of West Coast region. Under the COVID Care Initiative, each family will be provided with a free COVID Care kit containing pulse oximeter, digital thermometer, masks, sanitizer and First Aid Medicines. A printed leaflet in four languages is also made available as kit user guide to enable the family members to take preventive measures and seek immediate medical assistance in case of any symptoms related to Covid-19 is seen.

The Sailors' Society in its media release said that around 25,000 seafarers and family members in 10 port cities will benefit from the first roll-out of the project, set up in response to the latest deadly wave of corona virus in India. This project will be implemented through Volunteer Health Services (VHS) non-profit hospital in the Indian city of Chennai

and Yenepoya Medical College Hospital, in Deralakatte-Mangalore, Karnataka.

Inauguration of the COVID Care Kits distribution

The project was inaugurated on the eve of Seafarers Day at Kotikulum Merchant Navy Club, Kasargod hosted by the local Sailors' Society. Dr. Prakash R.M. Saldanha, Medical Superintendent of Yenepoya Medical College, Dr. Mohammed Guthigar, HOD of MSW & Nodal Officer of the project and Mr. Nelvin Nelson, Hospital Relations Officer were the guests of honour. Dr. Prakash R.M. Saldanha highlighted the partnership of the hospital with the Sailors' Society and demonstrated the use of items included in the COVID Care Kits.

CovidCare Kits

Free distribution of Covid Care kits were shipped to families of Sailor's in Mangalore, Kasargod, Goa and Ratnagiri by Dr. M.S. Moosabba, Dean of Yenepoya Medical College and Dr. Prakash R.M. Saldanha, Medical Superintendent of Yenepoya Medical College at Yendurance Zone, in the Yenepoya (Deemed to be University) campus. Dr. Mohammed Guthigar, Nodal Officer of the project, Mr. Nelvin Nelson, Hospital Relations Officer, Mr. Ashraf, Chief Pharmacist and Mrs. Vandana, Deputy Manager, Stores-Purchase were present.

Dr. Mohammed Guthigar

Tele-Counselling and Tele-Conferencing Services: A compassionate COVID-19 ICU care initiative

“Start by doing what’s necessary; then do what’s possible; and suddenly you are doing the impossible” Francis of Assisi

Author: Dr. Uma Kulkarni, Professor in Ophthalmology and Additional Faculty Centre for Ethics, Yenepoya deemed to be University umakulkarni@yenepoya.edu.in

YMCH and COVID-19 care:

Yenepoya Medical College Hospital has emerged as an active and leading service provider in the COVID-19 pandemic, benefiting not only Dakshina Kannada, but also other neighbouring and far-off districts of Karnataka and Kerala. Healthcare beyond the call of duty, which commenced promptly at the break of the first wave of the pandemic in April 2020, continues through the second wave with sincerity, dedication and perseverance. YMCH has offered a wide spectrum of COVID-19 services- laboratory testing, ICU and non-ICU care, quarantine and isolation facilities, vaccination drive, educational programs, community services and also research. In addition, the non-COVID-19 services have been uninterrupted through hospital care, outreach programs and telemedicine.

Emerging challenges in COVID-19 ICU care:

Amidst the many challenges, of serious concern was the COVID-19 ICU care. As ICU requirements overshoot preparedness, equipment was procured, COVID ICUs were expanded and workload was met head-on to match the rapidly expanding demand. However, during the second wave, some unique situations were observed:

1. Concerns of the strained ICU physicians:

The on-duty ICU physicians were stretched to the limits of physical endurance on account of the physical, visceral and mental discomforts of constantly wearing PPEs. They were overstrained with trying to communicate through layers. Working in these unfamiliar conditions was slow and painstaking with responsibilities of detailed ICU rounds stretching over several extended duty-hours. Beyond this, they had to spare additional time for counselling the patient’s family member(s) compounding their physical and mental strain.

2. Concerns of the patient-family unit:

ICU visits by family member(s) were necessarily restricted in terms of person and times per day, and only for the terminally ill patients. Moreover, mandatory wearing of personal protective equipment by the visitor made identification for the patient difficult and impacted the much-needed meaningful personal interactions. The role of families in patient care is pivotal, particularly in the Indian context. However, COVID policies caused distress and concerns to the patient-family unit.

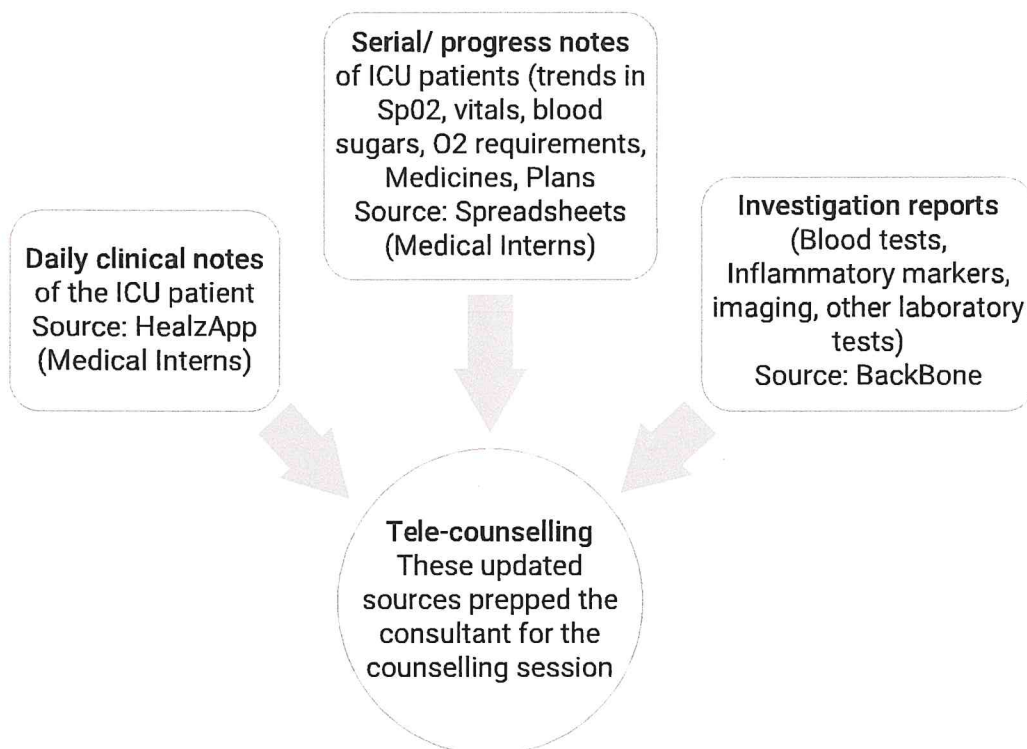

Unique situations call for innovative solutions:

A bold, unique and innovative system was conceived by the Hospital Administration Department under the guidance of the Medical Superintendent. With extensive deliberation

and strategic planning, varied and relevant resources were identified and integrated to address both the concerns simultaneously. A well-timed, well-organized, need-based system combining the benefits of “tele-counselling” and “tele-conferencing” under one umbrella was the most obvious solution.

Tele-Counselling:

Volunteering consultants took over the counselling duties thereby addressing the concerns of the strained ICU physicians. Three tele-counselling units were installed in the OPD to allow three consultants to do counselling of the family members of ICU patients simultaneously. Such a unit consisted

of a desktop with Wi-Fi connections, audio-visual apparatus and access to Backbone and HealzApp.

The high points of tele-counselling:

The consultants counselled the patient's

family member(s), face-to-face in the OPD, after compiling all essential ICU updates from the tele-counselling unit. They explained the patient's condition in terms of severity and status (improving/status quo/worsening) in a compassionate and truthful manner taking utmost care not to plant false hopes nor distress them with bad news. Contrary

ATTESTED

to our normative belief that 'patients know not much', most family members were well read about COVID care, thanks to the internet era! Their queries concerned current SpO₂, details of oxygen delivery, control of blood sugar, trends in CRP and D-dimer levels, follow-up X-rays, and medicines including Remdesivir. On a daily basis, consultants clarified innumerable doubts, addressed the concerns about recovery, discussed patient needs and reassured them. As expected, each counselling session was emotionally demanding for the consultants as they responded to the honest queries some of which had hazy answers:

How many more days in the ICU?
Why is the oxygen requirement increasing?
Is it possible to avoid NIV/intubation?
Will she improve?
Why is Remdesivir not acting?
Can we try the new drug?
Can we shift him to non-COVID ICU?
Why can't we repeat RT PCR?
When can we take him home?

The consultants took care to restrict only to counselling without overstepping into the duties of the ICU consultants particularly with respect to treatment choices.

Tele-Conferencing:

Tele-conferencing was conducted to address the concerns of the patient-family unit through a virtual, yet meaningful communication between the ICU patient and the family member(s). Using Google Meet, the same tele-counselling unit was used for tele-conferencing between the family members and the ICU patients (assisted by Junior Residents using PC tablets).

The high points of tele-conferencing:

Given the strict hospital visiting rules in the COVID-19 ICU, the tele-conferencing medium

offered as close a "face-to-face" meet as one would desire, keeping in mind COVID-19 appropriate behaviour. It allowed more than one family member to meet the patient (albeit, one at a time) without complete PPE (but, only masks) over 10-20 minutes, every day, meeting the unmet needs of the patient-family unit. It was immensely satisfying and a meaningful utilization of technology and time. It brought them together to discuss the patient's individual needs and wants ranging from food, clothes, sleep, oxygen, medicines, expenses, facilities; often drifting to home and family affairs; occasionally arguments and at other times whisperings of sweet nothings!

Eat well, you need energy to get better
Is it too cold in the ICU?
Don't look at the other ICU patients nothing like 'that' will happen to you.
Keep praying, we all are praying for you, with you.
Few more days and they will shift you out of ICU.
Everyone at home is waiting for you.
Don't cry. You will get breathing problems.
They are giving you a new mask (NIV you will feel better

Often, the non-medical needs and wants of the patient-family unit are undermined in the sophistication and complexities of medical care. The unique initiative at YMCH addressed this in an extremely delicate and successful manner- adding a new dimension to compassionate and ethical care.

It was comforting to see the family members breathe a sigh of relief after seeing and speaking to their dear ones in the ICU. They were seen giving reassurance and hope, alleviating their fears and anxiety, crying with them and praying for them. Any concerns raised either by the patient or the family were addressed immediately through an interaction of the consultant with the ICU Junior Resident and if required conveyed to the treating

physician. At the end of the session, the family member(s) left the place trusting the care their patient was receiving. At the other end of the spectrum, even the initially disbelieving COVID consultants were very happy with the contribution from the "tele-med-counsel" team, as this gave them much needed time to focus their energies on the more critically ill patients and their relatives.

Without Teamwork nothing is possible:

The interface was a combination of virtual and face-to-face meetings coordinated from OPD:

1. The on-duty ICU consultants identified all those ICU patients who were stable or less-than-critical and could be designated for tele-counselling. (For the rest, face-to-face counselling was carried out by the ICU physicians in the ICU counselling room)
2. The Junior Residents trained in COVID ICU basics, coordinated the system from the ICU and were assisted by interns posted for tele-counselling.
3. The interns completed the daily detailed notes in the Healzapp and the serial notes on the Spreadsheets. The images of the spreadsheets were sent through WhatsApp to the OPD interns.
4. The Hospital Administration staff ably assisted by the Medical Social Work department and the Information Technology department arranged for the counselling rooms, the hardware and software systems and the link-up. They also formed the common thread that coordinated the end result, through communications with the ICU physicians, tele-counselling team and the family members of ICU patients.
5. In the OPD, the Medical Interns kept the tele-

counselling units and spreadsheets ready.

6. The consultants counselled the patients' family members and enabled tele-conferencing between the patients and family members integrating the two processes.

Integration of Tele-Counselling and Tele-Conferencing Was A Win-Win For All:

The duration of each tele-counselling session ranged from 15 to 30 minutes and every day the team counselled from 20 to 25 patients over a period of nearly 2-3 hours per consultant. A total of 170 ICU patients-family member(s) were counselled over a period of 2 months in the peak of the second wave. Some were counselled for 4-5 days in a row until their patients got shifted to HDUs; a few needed counselling every day for more than 15 or more days.

Most of the time feedback was spontaneous and just a look at the faces of the relatives as they spoke to their admitted loved ones was visibly rewarding. Nevertheless, feedback was obtained informally from the family members and they found this system very comforting, supporting and reassuring. They looked forward to the tele-counselling sessions every day and were extremely satisfied with this unique interface.

The district authorities (including the COVID Nodal Officer for YMCH) were impressed and have appreciated the unique initiative that YMCH has taken in these testing times.

"As one of the counselling team members, the impact was on me too. I was fortunate to see a whole new face of compassionate care, in the most crucial times of the second and more severe wave of the pandemic. As an everyday learner of ethics, I feel contented that I could offer some purposeful and empathetic care

Covid -19 Vaccine: A Ray of Hope

Over the last one and half years, the world has been under the grip of Corona virus. Health professionals became warriors and did their best in treating the patients. World leaders adopted different measures to prevent the spread of the disease like implementation of lockdown, restricting intra and inter country travel etc. But, having dealt with other deadly pandemics earlier like small pox, polio, everyone knew that these were just temporary

measures and vaccines are the only solution to this problem. All over the world many pharmaceutical companies gave their best for attaining this goal and finally by the end of first wave of COVID-19 infection, different vaccines were available in the market.

In the process of starting vaccination campaign, India was not behind. The country planned to start the campaign on January 18th 2021 by vaccinating the COVID warriors (healthcare workers). Before initiation of this campaign, the government of India conducted a dry run to understand the ground reality in terms of conducting the campaign. Certain centres were selected all over the country for this and Yenepoya Medical College was selected from Dakshina Kannada district, Karnataka. The activity was inaugurated by Dr Rajesh B V, Reproductive and Child Health officer, Dakshina Kannada.

Yenepoya (Deemed to be University)
University Road, Deralakatte
Mangalore 575 018, Karnataka.

On 20th January 2021, Yenepoya Medical College started the COVID vaccination campaign in three sites within the campus. Initially only Covishield vaccine was administered in all the sites and later one site was exclusively used for Covaxin. This initial phase of vaccinating health care workers was followed by vaccinating general population aged 60 years and above. These sessions ended in April 2021 after administering about 4500 doses.

The occasion of Doctor's Day assumed more significance as it also marked the launch of vaccine Sputnik V. With that, Yenepoya Medical College Hospital became the first hospital in coastal Karnataka to administer Sputnik V. This achievement was attained under the leadership of Dr Akshaya KM with assistance from Dr Hrushikesh Udupa. People from all over the district and even from neighbouring districts and the state of Kerala are availing these services. Departments of Hospital Administration, Nursing, Pathology, and Anaesthesia are also playing a pivotal role in making this a huge success.

Next, the Department of Community Medicine embarked on a mop up drive to vaccinate the staff and students of the University. The result was that a total of 905 beneficiaries were

successfully vaccinated with Covishield 1st dose. This activity was implemented under the leadership of Dr Poonam R Naik with an able support from Dr Navya N and Dr Malavika Sachith in collaboration with the Primary health centre, Natekal.

Though there is still prevailing lower acceptance of this vaccine in general population, these efforts of vaccination, is believed to usher in a change in the predicted 3rd wave of COVID, reducing the number of serious cases and eventually to help wiping out of Corona virus from the population of this country.

Department of Community Medicine Yenepoya Medical College Yenepoya (deemed to be University)

“ Medical care is vital to all of us some of the time, but public health is vital to all of us all the time” C. Everette Koop

The pandemic has taught this to us like never before. When the department of Community Medicine first conducted a CME on 'Novel Corona Virus' in February 2020, little did we know that our journey had just begun and that we are going to have a continued engagement with this virus and the havoc it will cause in the months to follow. We went through various stages of coming to terms with this new public health challenge ranging from assessing the preparedness within and outside the campus, liaison with the District Health and Family Welfare Department, screening at various sites including airports and check-posts to a vast range of community activities and vaccination. When we look back, we at the department feel that we went through it gracefully and stoically. Of course, the challenges are not over with the threat of new variants looming large and the constantly changing needs of the community.

“Interdepartmental CME on “Updates on Corona virus”

We organized an interdepartmental CME titled “Updates on Corona virus” in collaboration with the Departments of General medicine, Microbiology and Hospital Administration. Talks were delivered on the introduction to this Novel Corona Virus Disease 2019 (COVID-19) followed by the WHO guidelines on Prevention and Control by Dr Subhashree Nandy and Dr Pavithra H from our department. This was supplemented with aspects on diagnostics, infection control and medical management

provided by the faculty from the Departments of Microbiology, General Medicine and Hospital Administration.

Collaboration with the District Health Administration

Time and again, Medical Colleges have complemented the efforts of the District Health Administration in addressing the public health challenges and have achieved significant results.

Dr Abhay S Nirgude, Nodal Officer for COVID-19 prevention and control at the University level, since the onset of the pandemic, has worked in close collaboration with the District Health Administration and facilitated the implementation of pandemic control activities within the University. Presently, he is the member of the district expert task force which has been continuously identifying measures to tackle the ever changing scenario of Covid 19 pandemic and is now looking into the preparedness measures for the third wave.

ATTESTED
ls

Mucormycosis, yet another challenge faced amidst the pandemic, required collaborative efforts from both the public and private sectors. This led to the constitution of a District Level Expert Committee. Dr Poonam R Naik is a member of this committee.

Screening at Airport

As per the directions received from the District Health Officer, Dakshina Kannada, faculty members from our department along with the faculty from General Medicine and staff nurses were deputed for screening the passengers of international flights at the Mangaluru International Airport, Bajpe. Passengers with upper respiratory symptoms were counseled to allay their anxiety.

Triage

Triage counter was set up at the Yenepoya Medical College Hospital (YMCH) for screening of the patients attending the out-patient services at YMCH. The screening included thermal scanning and collecting history from the patients and accompanying attendees. Individuals with COVID-19 symptoms or high temperature were guided to the fever clinic for further assessment. This activity helped prevent spread within the hospital.

RAPPID (The rapid appraisal of preparedness and performance of health systems in managing COVID-19 cases across districts in Karnataka)

Dr Akshaya K M was the lead faculty for the district team that assessed and documented the level of preparedness and performance of health system of Udupi district from a public health perspective. It focused on care components, testing (laboratory) facilities and surveillance structure, management of migrant population and assessment of transit points. Dr Subhashree Nandy and Dr Vidya Pai, Professor, Microbiology were the other team members. The activity was commissioned by Departments of Health and Family Welfare and Medical Education, Government of Karnataka with technical support from Centre for Public Health, NIMHANS during June 2020. This experience was invaluable in terms of implementing some of these activities at the institution level.

Quarantine center and Covid Care Center

The University set up a quarantine center as per the state guidelines for the contacts of Covid patients and travelers from other states/ countries from March 2020 in the initial phases of the pandemic. Later, the center was converted to a 100 bedded Covid Care Center and was recognized by the Department of

Health and Family Welfare for treatment of asymptomatic/mild cases of Covid-19. The department took the responsibility of both these activities. Over 600 patients have been treated and monitored at this center till date. Dr Akshaya K M and Dr Shubankari Adhikari are the faculty coordinators.

Staff clinic

There was fair amount of anxiety among the staff members when the country unlocked and the activities limped back to normal. We managed a Staff Clinic from July 2020 - February 2021. The staff/ students were screened for Influenza like symptoms and were provided with appropriate referral and counseling services. Dr Abhay S Nirgude and Dr Akshaya K M were the faculty coordinators.

Covid-19 Vaccination drive

The biggest hope during the first phase of the pandemic was an effective vaccine. We conducted first and second phases of the Covid-19 vaccination drive across three sites in the campus. Over 4500 doses of Covishield and Covaxin were administered to the staff and students of our University and the general public. Another jewel in the University's crown was the implementation of Sputnik V vaccination. YMCH became the first hospital in coastal Karnataka to launch Sputnik V vaccination under the leadership of Dr Akshaya KM with assistance from Dr Hrushikesh Udupa. The hospital aims to vaccinate at least 4800 people in the initial phase with two doses of this vaccine. We would like to place on record the support we received from Departments of Pathology, Hospital Administration, Nursing and Anesthesia.

The Department also organized the mop up drive to vaccinate the staff and students of the University. A total of 905 beneficiaries were

successfully vaccinated with Covishield 1st dose. This activity was implemented under the leadership of Dr Poonam R Naik with an able support from Dr Navya N and Dr Malavika in collaboration with the Primary health centre (PHC), Natekal.

Home isolation monitoring

We took up the activity of monitoring COVID positive persons; especially persons aged ≥ 45 years and those with co-morbidities in Ullal Taluk in collaboration with the District Health and Family Welfare Office, Dakshina Kannada and Yenepoya Nursing College. Over a period of two months we covered a lot of ground, with almost 330 patients monitored in six areas of Ullal. A standard assessment form based on the Government of Karnataka guidelines was developed and used for monitoring. All members of the department participated in this activity enthusiastically. The opportunity to allay anxiety in the far-fetched areas was a unique gratifying experience. Dr. Pracheth R was the nodal officer for this activity.

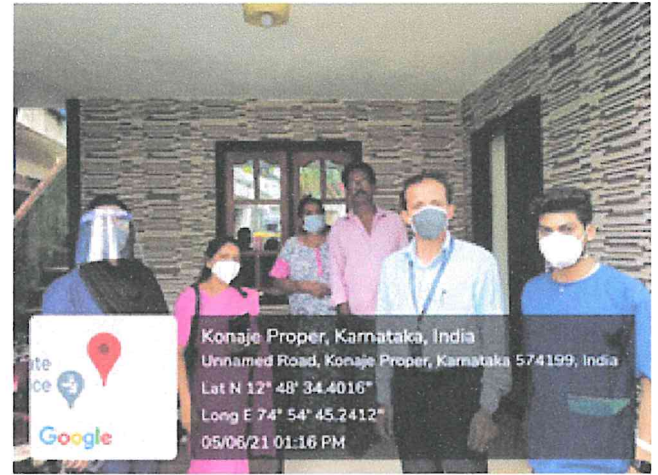

“Vaidyara Nade Halliya Kade” (Doctors towards villages)

The Government of Karnataka launched a programme called “Vaidyara Nade Halliya Kade (Doctors Towards Villages)” to tackle the spread of COVID-19 to villages. This activity included door-to-door survey of the population to screen for COVID-19 symptoms and facilitating the testing and treatment of COVID-19 positive patients in the nearest PHC.

Dr Poonam R Naik was the lead faculty, Dr Imaad Mohammed Ismail was the Nodal officer for implementation of this activity and Dr. Shubhankar Adhikari assisted the nodal officer.

Daily around 40 interns, supervised by the faculty and post graduates formed teams and visited the identified four areas of Ullal taluk. The local PHC staff team provided guidance to our teams in the field and facilitated smooth implementation.

With this activity we were able to reach out to a large population of 17,887 in the rural areas

Coordination with Directorate of Medical Education (DME), Government of Karnataka for COVID-19 Control

Dr. Imaad Mohammed Ismail was designated as the nodal officer for coordination with DME for and reporting of daily data related to bed and oxygen availability for health planning and bed allocation.

Online home isolation monitoring of COVID positive patients by our final year MBBS students

Yenepoya Medical College, Yenepoya (Deemed to be University) has deputed 70 final year medical students for this activity. After being trained by the officials from the Government of Karnataka and StepOne, our final year students have been monitoring Covid positive patients placed under home isolation in Bengaluru and Rest of Karnataka under the supervision and guidance of Dr. Pracheth R, the nodal officer for this activity. A mobile application named Fresh Desk is used by the students to make Interactive Voice Response System (IVRS) calls to the COVID positive patients allotted to them on a daily basis.

Tele-contact tracing and Tele-monitoring

Contact tracing has been an important element for containment of the pandemic and Tele-health has been identified as an efficient measure. Our team of paramedical staff and interns have been posted at the District COVID War Room at Mangaluru City Corporation premises and the Gram Panchayat Offices of Someshwara and Kotekar for tele-contact tracing, tele-monitoring and electronic data management. The team from our department has been carrying out these duties diligently under the guidance of Dr Pracheth R, who has been coordinating this activity.

Data management is of paramount importance in effective control of any public health event. We supported this activity of the Government for Puttur Taluk, coordinated by Dr Rohit M.

Dr Madhavi Bhargava is a member of Internal Death Review Committee since August 2020. This committee was constituted as per the mandate of Deputy Commissioner, Dakshina Kannada to look at symptomatology, delays in reaching hospital, duration of hospital stay, complications and therapeutics.

Screening of travelers at Talapady check post

With the newer guidelines of screening travelers coming from the neighbouring state,

interns from Yenepoya Nursing College are posted at the Talapady check post where the travelers were screened and tested for Covid 19. Dr Poonam R Naik is the lead faculty for this activity.

COVID-19 control on campus activities

Charity begins at home, and we at the department firmly believe in it. It was important to conduct awareness sessions on prevention and control for our medical students. The challenge of any vaccine hesitancy was also our priority. Dr. Imaad Mohammed Ismail, as the task force officer for COVID-19 control in campus of Yenepoya (Deemed to be University) coordinated all of these. This also included designing and maintaining online real-time data, contact tracing, testing, isolation and treatment where necessary. This helped contain outbreaks within the campus.

Unity is strength. Together, we can do more. Thus, we, the Department of Community Medicine, have worked hard in unison to combat this unprecedented pandemic.
