Rainwater harvesting helps institute beat water woes

Deepthi.Sanjiv
@timesgroup.com

Mangaluru: Dakshina Kan-
nada district may not have im-
plemented rain water har-
vesting (RWH) in commercial
and residential complexes
strictly, yet many institutions
are gradually opting for RWH
to fight growing water crisis.
Yenepoya (deemed to be uni-
versity) has reduced depend-
ence on external water supply
after it implemented a robust
water conservation plan that
includes rainwater harvest-
ing and borewell recharge.

Bhagya B Sharma, assist-
ant director, Centre for Envi-
ronmental Studies, Yenepoya
(deemed to be university) told
TOI: "Rainwater harvest-
ing is being carried out in
the premises to conserve
water for internal use. There
are three rainwater collec-
tion ponds. The main cam-
pus has a harvesting pond of
one and half acre area with
about 3.5 crore litres capaci-
ty. It has a well in the centre
and water for daily use is
pumped from the well. The
second pond in Naringana
Ayush campus has 1 crore
litres capacity. This has been
designed like the traditional

CONSERVING WATER: RWH pond at Yenepoya main campus

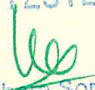

stepwell with 35 feet depth.
The third pond of 80 lakh
litres capacity has an open
well adjacent to it and this
pond helps recharge well and
borewells."

The institute has 12 bore-
wells and water is drawn
throughout the year. The
ponds have helped to revive
the underground watertable
and provide water during the
lean period. Roof rainwater
harvesting units are installed
in eight buildings and water
is channelled to recharge bore-
wells. "For instance, in the low-
lying area at the centre of the
campus there is a big ground
where a small bund has been
created that helps in water re-
charge. The management has
seen to it that the campus has
limited interlocked area so
that ground water recharge is
not affected," said Sharma.

The institute has a daily
water requirement of 1,100
kilo litres. Aerators help to re-
duce water pressure by 15%
and hence have been installed
in canteen and hostels. Flow
meters are installed to moni-
tor and control water con-
sumption. Waste water gener-
ated in the campus is treated
in three sewage treatment
plants and the treated water
meets the prescribed stan-
dards for landscape irriga-
tion. Awareness programmes
on importance of water and
conservation are routinely
held in the campus. As per
UGC guidelines, environmen-
tal science is a compulsory pa-
per for all streams and the in-
stitute has students from sev-
eral other campuses visiting
them to learn and understand
water conservation and envi-
ronment sustainability
