

# KaraSeva

## Introduction

Being aware of how limited medical aid and healthcare awareness is amongst many villages in India, and how children the torchbearers of our nation have very little or no access to proper healthcare facilities, students of Yenepoya Medical College with association of Rural Health Care And Development Centre have constituted a NGO; KARASEVA to implement school based activities.

KARASEVA is an idea that bloomed in the minds of few undergraduate medical students by which they reach out to school children helping them in small ways by using medical knowledge that has been instilled in them for a good cause.

KARASEVA has signed MOU with Rural Health Care And Development Centre.

## Vision and Mission

**Vision:** To have a healthier and brighter population in Dakshina Kannada District.

**Mission:** To identify rural schools which lack medical facilities.  
To screen them for basic ailments.  
To encourage health seeking behavior in them.

## Goals and Objectives

- The primary objective is to screen school going children for common ailments like anemia, dermatological conditions and dental ailments. The children screened are often neglected in terms of health care and these common and preventable ailments are missed. Aim is for early detection.
- To raise awareness about these conditions and on how to prevent it among the school going children and also the teachers.
- Involve as many medical students as possible, providing them with hands on experience on how to carry out screening procedure.
